

# Sacred India

## Temple Tourism Website — Design & Implementation Details

This document records the visual design, HTML structure, temple content, attributes, CSS properties, effects, and responsive behaviour used in the Sacred India webpage. The website is built with HTML5 and CSS3; no JavaScript is required for the current design.

### 1. Project Overview

- Project title: Sacred India — Explore the Timeless Temples of India.
- Purpose: Present famous Indian temple destinations in a modern, aesthetic tourism webpage.
- Files: index.html (page structure/content) and style.css (visual styling and responsive rules).
- Design direction: calm heritage-inspired palette, editorial typography, large photography, spacious sections, and subtle interactions.
- External dependencies: Google Fonts and remote images hosted through Wikimedia Commons redirect URLs. An internet connection is needed for these assets.

### 2. Front-End Technologies

| Technology    | Where used                  | Purpose                                                                                                                    |
|---------------|-----------------------------|----------------------------------------------------------------------------------------------------------------------------|
| HTML5         | index.html                  | Semantic page structure: header, navigation, sections, cards, gallery, form and footer.                                    |
| CSS3          | style.css                   | Colors, spacing, typography, grid/flex layouts, image treatments, hover transitions, animation and responsive breakpoints. |
| Google Fonts  | CSS @import                 | DM Sans for body/interface text; Playfair Display for editorial headings.                                                  |
| Remote images | HTML img and CSS background | Temple photography for the hero, cards, gallery, introduction and featured destination.                                    |

### 3. Visual Style Guide

#### 3.1 Colour palette

| Name               | Hex value | Usage                                        |
|--------------------|-----------|----------------------------------------------|
| Ink / primary text | #1F241F   | Main headings and body text                  |
| Muted grey-green   | #687067   | Supporting text and descriptions             |
| Cream              | #F6F2E9   | Temple and travel guide section backgrounds  |
| Paper              | #FFDFD8   | Main page and card backgrounds               |
| Sage               | #536858   | Links and accent text                        |
| Deep sage          | #33473A   | Featured section, buttons and footer         |
| Warm gold          | #C4934B   | Eyebrows, highlights and small accents       |
| Light border       | #DED8CB   | Card borders and separators                  |
| White              | #FFFFFF   | Text on dark sections and button backgrounds |

### 3.2 Typography

- Headings: Playfair Display, generally weight 600, with a serif editorial look.
- Body and interface: DM Sans, using weights 400–700.
- Main hero heading: responsive clamp() sizing, approximately 3rem–6rem depending on viewport.
- Section headings: Georgia-like editorial scale through Playfair Display, typically around 2.2rem–3.7rem.
- Eyebrow labels: small uppercase text, gold colour, bold weight, and wide letter spacing.
- Location labels: uppercase, gold, bold, compact text with letter spacing.

## 4. Page Structure and Section Details

### 4.1 Header and navigation

- Brand text: “Sacred India”, with “India” highlighted in sage green and an Om symbol inside a circular mark.
- Navigation links: Home, Explore Temples, Gallery, Travel Guide, Contact.
- HTML elements: header, div.nav-wrap, a.logo, span.logo-mark, nav.nav-links.
- CSS: sticky positioning at top: 0; z-index: 100; semi-transparent paper background; backdrop-filter blur; bottom border.
- Interaction: navigation links reveal a gold underline that animates from zero width to full width on hover.

### 4.2 Hero section

- Main headline: “Discover the Sacred Heritage of India”.
- Supporting text introduces the mix of history, architecture, culture and spirituality.
- Background image: Kedarnath Temple, with a dark multi-stop linear-gradient overlay to maintain text contrast.
- Call to action: “Explore Temples” links to the temple cards section.
- Visual treatment: large serif heading, gold-highlighted phrase, white text, generous spacing and a bottom scroll cue.
- CSS effects: cover-sized background image, background-position center, rise animation on content, button lift and colour transition.

### 4.3 Introduction section

- Two-column layout: temple image on the left, introductory copy on the right.
- Image: Konark Sun Temple, with rounded top-right corner and subtle shadow.
- Copy: explains India's temple heritage and invites visitors to explore ten destinations.
- Statistics row: 10 Iconic Temples, 8+ Regions Represented, 1000s Years of Heritage.
- CSS: CSS Grid, vertically centered alignment, border separator above statistics, responsive image height.

### 4.4 Temple destination cards

- Ten destination cards, arranged in a three-column desktop grid and two-column tablet grid; one column on small screens.
- Each card contains a photo, numbered badge, location, temple name, short description, one fact/highlight and an “Explore more” link.
- Card attributes: semantic article element; image alt text; headings; paragraph text; anchor links.
- Hover behaviour: card moves upward, shadow becomes stronger, border changes subtly, image zooms and arrow shifts diagonally.
- Card image: fixed-height cropped image using object-fit: cover; card content has consistent padding and separator lines.

## 4.5 Temple image gallery

- Four gallery cards: Kashi Vishwanath, Meenakshi Amman, Somnath and Kedarnath.
- Each image has a caption with temple name and location.
- Layout: CSS Grid with one large two-row image and three smaller images on desktop; two-column layout on mobile.
- Hover behaviour: image scales up slightly and opacity changes; dark gradient overlay keeps captions readable.

## 4.6 Featured destination

- Featured temple: Kedarnath Temple, Uttarakhand.
- Two-column desktop layout: large image on one side, dark green content panel on the other.
- Details shown: location/altitude, best time to visit, nearest airport and railway reference.
- Button: “Plan this journey” links to the enquiry form.
- Responsive behaviour: image and content stack vertically on narrower screens.

## 4.7 Why explore Indian temples?

- Four information cards: Architecture, Heritage, Culture, Travel Experience.
- Each card uses a simple typographic symbol rather than an external icon library.
- Style: pale cream card background, thin border, circular outlined icon area and sage text.
- Hover effect: card rises slightly and receives a soft shadow.

## 4.8 Travel guide

- Six cards cover Best time to visit, Transportation, Accommodation, Visitor guidelines, Photography and Nearby attractions.
- Each card uses a two-digit number, heading and short practical description.
- Layout: three columns on desktop and two columns on tablet; one column on small mobile screens.
- Background: cream section to visually separate the guide from surrounding sections.

## 4.9 Plan your temple journey form

- Fields: Full Name, Email, Select Temple/Destination, Travel Date, Number of Visitors, City and Message.
- HTML form controls: input type=text, input type=email, select, input type=date, input type=number and textarea.
- Submit button label: “Plan My Journey”.
- Visual style: cream-tinted form panel, two-column field rows, rounded/square-soft borders, consistent spacing and distinct dark sage button.
- Focus state: gold border and a subtle gold-tinted box-shadow.
- Important: this is a visual front-end form only. No backend, email delivery, data storage or form submission processing is implemented.

## 4.10 Footer

- Brand and short website description.
- Quick links: Home, Temples, Gallery, Travel Guide and Contact.
- Popular destinations: Kedarnath, Varanasi, Ayodhya, Puri and Tirupati.
- Contact placeholder: hello@sacredindia.example; social links are visual placeholders.
- Style: deep sage background, light text, four-column desktop layout and a bottom copyright row.

## 5. Temple Data and Image Attributes

The temple cards use a consistent content pattern: image + alt text, location, title, short description, one fact/highlight and an Explore more link. The descriptions are concise display summaries rather than full historical records.

| No. | Temple / Location                                  | Card description                                                                             | Fact / highlight                                 | Image filename reference                                 |
|-----|----------------------------------------------------|----------------------------------------------------------------------------------------------|--------------------------------------------------|----------------------------------------------------------|
| 01  | Kashi Vishwanath Temple<br>Varanasi, Uttar Pradesh | One of the twelve Jyotirlingas of Lord Shiva, on the western bank of the Ganga.              | Nagara style; gold-plated spire.                 | Kashi Vishwanath Temple in 2025.jpg                      |
| 02  | Golden Temple<br>Amritsar, Punjab                  | Harmandir Sahib sits within the Amrit Sarovar and is known for its golden beauty and Langar. | Sikh architecture; community meals.              | Golden Temple .jpg                                       |
| 03  | Meenakshi Amman Temple<br>Madurai, Tamil Nadu      | Dravidian temple known for towering gopurams and thousands of sculptures.                    | Hall of a Thousand Pillars.                      | Meenakshi Temple.jpg                                     |
| 04  | Tirupati Balaji Temple<br>Tirumala, Andhra Pradesh | Dedicated to Lord Venkateswara and set among the seven hills of Tirumala.                    | Devotees offer hair as a mark of devotion.       | Tirumala Venkateswara Temple, Tirupati (23711454653).jpg |
| 05  | Jagannath Temple<br>Puri, Odisha                   | Char Dham pilgrimage site celebrated for the annual Rath Yatra.                              | Kalinga style; curved tower.                     | Jagannath Temple,Puri.jpg                                |
| 06  | Somnath Temple<br>Prabhas Patan, Gujarat           | Jyotirlinga temple on the Arabian Sea coastline with a long history of rebuilding.           | Chaulukya-inspired architecture.                 | Somnath Temple.jpg                                       |
| 07  | Akshardham Temple<br>New Delhi, Delhi              | Modern monument showcasing traditional Hindu architectural craftsmanship.                    | Pink sandstone, white marble and fountain shows. | Akshardham temple, Delhi.jpg                             |
| 08  | Konark Sun Temple<br>Konark, Odisha                | UNESCO World Heritage Site designed as a giant stone chariot dedicated to Surya.             | Carved wheels can function as sundials.          | Konark Temple-Sun Temple.jpg                             |
| 09  | Vaishno Devi Temple<br>Katra, Jammu & Kashmir      | Cave shrine in the Trikuta Mountains reached by a pilgrimage route from Katra.               | Around 5,200 feet above sea level.               | Vaishno devi temple.jpg                                  |
| 10  | Kedarnath Temple<br>Kedarnath, Uttarakhand         | Himalayan Jyotirlinga surrounded by snow-capped peaks and reached by a pilgrimage journey.   | Approximately 3,580 metres altitude.             | Kedarnath Temple.jpg                                     |

## 6. HTML Attributes and Elements Used

| Attribute / selector                                                              | Purpose                                                                                     |
|-----------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------|
| <code>lang="en"</code>                                                            | Declares the document language as English.                                                  |
| <code>meta charset="UTF-8"</code>                                                 | Supports standard Unicode text, including the Om character.                                 |
| <code>meta name="viewport" content="width=device-width, initial-scale=1.0"</code> | Helps the layout scale to mobile device width.                                              |
| <code>title</code>                                                                | Sets the browser tab title.                                                                 |
| <code>href</code>                                                                 | Links navigation, buttons and stylesheet references to page sections or files.              |
| <code>class</code>                                                                | Connects HTML elements to CSS rules.                                                        |
| <code>id</code>                                                                   | Provides section targets for in-page navigation: home, temples, gallery, guide and contact. |
| <code>src</code>                                                                  | Specifies the image URL.                                                                    |
| <code>alt</code>                                                                  | Provides a text alternative describing each temple image.                                   |
| <code>aria-label</code>                                                           | Labels the main navigation for assistive technology.                                        |

|                                    |                                                                   |
|------------------------------------|-------------------------------------------------------------------|
| <code>type="email"</code>          | Uses the browser's email input type.                              |
| <code>type="date"</code>           | Displays a date-oriented input control.                           |
| <code>type="number" min="1"</code> | Requests a numeric visitor count with a minimum of one.           |
| <code>rows="4"</code>              | Sets the visible height of the message textarea.                  |
| <code>:hover / :focus</code>       | CSS pseudo-classes used for hover effects and form focus styling. |

## 7. CSS Properties and Techniques Used

| Technique                 | Properties / purpose                                                                                                                                      |
|---------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------|
| Layout                    | display: flex; display: grid; flex-direction; align-items; justify-content; gap; grid-template-columns; grid-template-rows; width; max-width; min-height. |
| Spacing                   | margin; padding; box-sizing: border-box; line-height; letter-spacing.                                                                                     |
| Typography                | font-family; font-size; font-weight; color; text-align; text-transform; text-decoration.                                                                  |
| Images and backgrounds    | background; background-image; background-size: cover; background-position: center; object-fit: cover; width: 100%; height: 100%.                          |
| Borders and shape         | border; border-radius; border-top; border-bottom; outline.                                                                                                |
| Depth and readability     | box-shadow; text-shadow; linear-gradient overlays; backdrop-filter: blur().                                                                               |
| Animation and transitions | transition; transform: translateY(); transform: scale(); opacity; @keyframes rise; animation.                                                             |
| Responsive styling        | @media (max-width: 900px); @media (max-width: 620px); clamp() for fluid heading sizes.                                                                    |
| Form interaction          | :focus selectors, border-color, box-shadow, resize: vertical.                                                                                             |
| Sticky navigation         | position: sticky; top: 0; z-index.                                                                                                                        |

## 8. Responsive Behaviour

- Desktop (> 900px): navigation on one row; three-column temple grid; four-column benefits cards; three-column guide grid.
- Tablet (up to 900px): introduction and featured content stack; temple cards use two columns; guide uses two columns; footer uses two columns.
- Mobile (up to 620px): navigation can scroll horizontally; temple and guide cards become one column; form fields stack; footer becomes one column; featured image and text stack.
- Gallery changes to a two-column grid on mobile, with the first gallery image spanning both columns.
- The hero heading and section headings use clamp() or viewport-aware sizing to scale between screen sizes.

## 9. Interaction Summary

| Element          | Effect                                                           |
|------------------|------------------------------------------------------------------|
| Navigation links | Animated gold underline on hover.                                |
| Buttons          | Small upward movement and background/colour transition.          |
| Temple cards     | Card lift, stronger shadow, subtle border change and image zoom. |
| Gallery cards    | Image zoom and dark overlay/caption treatment.                   |
| Text links       | Arrow shifts on hover; footer links move slightly to the right.  |
| Form fields      | Gold border and soft focus ring when selected.                   |
| Hero text        | One-time rise/fade entrance animation.                           |

## 10. Limitations and Notes

- The page is front-end only. The enquiry form has no backend or submission handler.

- The “Explore more” links currently point to the contact/form section rather than individual temple detail pages.
- Social links and the example email address are placeholders and should be replaced before publication.
- Temple photos are remote URLs. If an image host changes its redirect or access rules, an image may stop loading; for a final deployment, verify each image and consider using locally stored, appropriately licensed image files.
- Google Fonts require internet access. If unavailable, the browser will use fallback fonts.
- The text and travel details are short display summaries. Verify practical travel information, opening times, seasonal access and temple rules before using the site as a live travel service.
- No JavaScript is used for the current visual effects; they are implemented with CSS hover, focus, transition and animation rules.

## 11. File Structure

```
Sacred_India_Temple_Tourism/  
├── index.html  – page content and semantic structure  
└── style.css   – visual design, effects and responsive layout
```

## 12. How to Run

1. Extract Sacred\_India\_Temple\_Tourism.zip.
2. Keep index.html and style.css in the same folder.
3. Open index.html in a modern web browser.
4. Use an internet connection to load the remote images and Google Fonts.
